TOMATOES

The Proof Is In The Harvest

Fast Acting

The 11.6% nitrate nitrogen in Nutrien CAN17 provides quick uptake and improved plant response while the 5.4% ammoniacal nitrogen gives sustained plant feeding. The readily available nitrogen helps tomato plants recover quickly after the shock of thinning or following herbicide applications. The nitrate also provides a quick response in cooler soils.

Quick Recovery

The readily available nitrate nitrogen in Nutrien CAN17 helps tomato plants recover quickly after the shock of thinning or following herbicide applications. The nitrate nitrogen also provides a quick response in cooler soils.

Increases Water Penetration

The 8.8% soluble calcium in Nutrien CAN17 improves water penetration, allowing available nitrogen and moisture to move easily into the root zone. The calcium also helps prevent calcium related disorders, such as blossom end rot.

Easy To Apply

Nutrien CAN17 can be sprayed on the soil surface, side-dressed, applied through sprinkler or surface irrigation systems.

Holds Tomatoes Through Harvest

The nitrate nitrogen in Nutrien CAN17 helps keep the nitrogen level consistent when applied later in the season. And, it helps prevent sunburn by keeping leaves healthy.

Won't Plug Systems

Nutrien CAN17 is a clear, stable liquid not a mix of dry calcium nitrate and other nitrogen solutions, which can plug sprinkler systems and sprayers.

No Other Liquid Comes Close
