

The Original **CAN17** *Liquid Fertilizer*

The Proof Is In The Harvest

Fast Acting

The 11.6% nitrate nitrogen in Nutrien CAN17 provides quick uptake and improved plant response while the 5.4% ammoniac nitrogen gives sustained plant feeding.

Effective In Cooler Soils

The fast acting nitrate nitrogen in Nutrien CAN17 is readily available to developing vegetable plants, even in cooler temperatures.

Increases Water Penetration

The 8.8% soluble calcium in Nutrien CAN17 improves water penetration, allowing available nitrogen and moisture to move easily into the root zone.

- **Celery:** The calcium also helps prevent calcium related disorders.
- **Lettuce:** Important in reducing tip burn and producing crunchy lettuce with a good shelf life.
- **Broccoli:** Calcium is necessary for proper floret development, head firmness and quality.
- **Onions:** Calcium can improve tolerance against disease and reduce levels of rot.

Improves Size, Color And Quality

When applied immediately prior to harvest, the quick shot from Nutrien CAN17 increases color, size and vegetable quality.

Easy To Apply

Nutrien CAN17 can be applied on the soil surface, injected in the soil, applied through sprinkler or surface water irrigation systems.

Won't Plug Systems

Nutrien CAN17 is a clear, stable liquid not a mix of dry calcium nitrate and other nitrogen solutions, which can plug sprinkler systems and sprayers.

No Other Liquid Comes Close
