Liquid Fertilizer

ALMONDS

The Proof Is In The Harvest

Fast Acting

The 11.6% nitrate nitrogen in Nutrien CAN17 provides quick uptake and improved plant response, while the 5.4% ammoniac nitrogen gives sustained plant feeding. Helps develop and protect crop set by giving trees an extra nitrogen push.

Nitrogen During Critical Periods

Readily available nitrate nitrogen in Nutrien CAN17 allows you to apply it during the critical periods of tree development resulting in improved nut set.

Increases Water Penetration

The 8.8% soluble calcium in Nutrien CAN17 improves water penetration allowing available nitrogen and moisture to move easily into the root zone and solidify cell wall and membrane formation.

Easy To Apply

Nutrien CAN17 can be sprayed on the soil surface, injected in the soil, applied through sprinkler, mister, drip or surface water irrigation systems.

Won't Plug Systems

Nutrien CAN17 is a clear, stable liquid not a mix of dry calcium nitrate and other nitrogen solutions, which can plug sprinkler systems and sprayers.

No Other Liquid Comes Close
